

edgebox audio conference bridge

MRS SA edgebox - In-House Audio Conference Bridge

The edgebox

Audio conferencing has become a routine part of day-to-day business. Its use results in lower travel costs, improved business efficiencies, and higher employee productivity. Historically, corporations have been outsourcing this service to the telephone companies, which generally charge a per person premium rate per call.

The **edgebox** is a feature rich and economical audio conference bridge that connects directly to your current in-house telephone infrastructure (PABX), eliminating the necessity of using expensive outsourced conferencing services. Typically companies save between 85 to 90% in cost by having their own in-house conferencing system.

The **edgebox** audio conference bridge connects to your PABX via SIP, ISDN (PRI E1), BRI or analogue ports. A network or wireless connection is used for administration.

The versatility of the **edgebox** allows registered users to create their own conference rooms via any telephone device and define the conference access PIN. Conferences can also be created by administrative users i.e. switchboard operator and used with the company calendar (MS Exch/IBM LN/Novell), allowing all staff members access an in-house, cost effective conferencing service.

For more **edgebox** information please contact:

MRS SA Pty Ltd.
Tel: +27(0)11-524-8600
Fax: +27(0)11-524-8620
email: sales@mrssa.com

The intuitive web base user interface allows for quick and easy configuration of conference rooms and the **edgebox** supports all room conferencing devices. When used in conjunction with the MRS Web collaboration software, presentations can be made to large audiences i.e. product presentations, sales reviews, etc. without anyone having to leave the office.

edgebox Standard Features

- Simple/Quick Installation
- Licensed for up to 20 concurrent participants
